The carbohydrate moieties in glycoproteins, such as glycolipids and glycoproteins, may be the causes of many diseases. In this paper, we describe a method to separate glycoproteins with specific carbohydrate structures from non-glycoproteins based on their binding to the lectins concanavalin A (ConA), wheat germ agglutinin (WGA), and Ricinus communis agglutinin (RCA). The glycans in the glycoproteins were characterized by high-performance anion-exchange chromatography-pulsed am
